

Index

A

accelerometer, 26
acoustic sensor, 27, 266, 268
acousto-optic modulator, 24,
30, 266
aether, 2
aircraft, 29
Allan deviation, 14
Allan variance, 171
amplified spontaneous emission
(ASE), 8
amplified spontaneous emission,
149
angle error, 109
angle random walk (ARW), 48
attitude referencing, 99

B

backscatter, 30
backscattering noise, 161
beamsplitter, 31
bias error, 155
bias instability, 49
bias offset error, 48
bias stability, 115
biasing modulation amplitude, 162
biasing modulation–demodulation, 6
biasing modulation, 158
birefringence modulation, 159
Brillouin gain spectrum, 118
Brillouin optical time-domain
analyzer (BOTDA), 11
broadband spontaneous-emission
source, 8

C

capillary waves, 153
carrier suppression, 169, 172
closed loop, 21, 266
closed-loop scheme, 6
coherence collapse, 161
coherence function, 9
coherent backscattering noise,
152, 163
coherent backscattering, 155
common input–output port, 5

D

D-shaped cross-section, 43
deadbeat control filter, 102
depolarization length, 159
detector noise, 162
digital phase ramp, 6
dispersion, 24
distributed polarization extinction
ratio (PER), 9
distributed scattering, 155
distributed strain, 118
DSP-1750, 53
DSP-1760, 55
DSP-3000, 53
dynamic biasing modulation, 173

E

E•Core fiber, 43
E•Core fiber:1000 and 50, 2000
eigenfrequency, 102
elliptical core, 39

erbium-doped fiber amplifier (EDFA), 8
extinction ratio, 157

F

Faraday effect, 12, 152
fiber crossover, 221
fiber optic gyro (FOG), 1
fiber optic gyroscope (FOG), 39, 42
fiber optic gyroscope (FOG):
 open-loop, 46
fiber trimming, 253
filters, 27
Fizeau's experiment, 3
four-state modulation, 6
Fresnel–Fizeau drag effect, 3

G

Gaussian distribution, 156
Gaussian white noise (GWN),
 154, 167
glass bobbin, 117
group birefringence, 224
guidance system, 261

H

hardware-in-the-loop (HITL), 102
HITL, 106, 108
hollow-core fiber (HCF), 153, 174
hollow-core micro-structured
 fiber, 12

I

IMU:1725, 57
IMU:1750, 56
IMU:1775, 56
inertial measurement unit (IMU), 42
inertial navigation system (INS), 42
inertial navigation system:
 GEO-FOG 3D, 58
inertial reference unit (IRU), 99
inertial systems, 39

insertion loss (IL), 219
integrated-optic channel
 waveguide, 14

K

Kerr constant, 175
Kerr effect, 152
Kerr phase error, 160
knife-edge near-field Fresnel
 diffraction, 17

L

launch vehicles, 35
level-wound coil, 46
license, 26
linewidth broadening, 161, 164
Lloyd mirror effect, 16
lock-in, 30

M

Mach–Zehnder, 268
magnetic dependence, 13
magneto-optic modulator, 31
McDonnell Douglas Astronautics
 Company (MDAC), 261
McDonnell Douglas, 266
mechanical gyros, 29, 261
Michelson interferometer, 268
minimum configuration, 31
Monte Carlo simulation, 104
multi-integrated optical circuit
 (MIOC), 102
multifunction integrated optic
 circuit (MIOC), 154
multiple function integrated optical
 chip (MIOC), 218

N

navigation accuracy, 99
navigation and control, 60
navigation-error equations, 103
noise spectrum, 156
noise, 266, 268

O

octapole winding, 115
oil and gas industry, 26
open-loop fiber optic gyro, 33
optical circuit, 44
optical coherence domain
 polarimetry (OCDP), 9
optical coherence tomography
 (OCT), 216, 254
optical coherence-domain
 polarimeter (OCDP), 222
optical fiber, 42
optical Kerr effect, 8
optical spectrum analyzer
 (OSA), 9

P

path-matched interferometry, 9
phase error, 158
phase noise, 155
phase nulling, 24, 266
photon noise, 14
photonic crystal, 153
piezoelectric (PZT) modulator, 47
piezoelectric modulator, 31
pointing error, 251
polarization control, 268
polarization coupling, 157–158
polarization extinction ratio
 (PER), 219
polarization rejection, 16
polarization-maintaining (PM)
 fiber, 155
polarizer, 31, 157
positioning and imaging, 60
proper frequency, 6
proton-exchanged lithium niobate
 (LiNbO₃) integrated-optic
 circuit, 9
pseudo-random bit sequence
 (PRBS), 153, 166

Q

quadrupolar winding, 11
quadrupole winding method, 46
quadrupole winding, 115

R

random bit sequence (RBS), 166
rate error, 109
reciprocal configuration, 4
relative intensity noise (RIN), 10,
 13, 149, 162
relative intensity noise (RIN):
 reduction, 14
remotely operated vehicles (ROVs),
 58
ring laser gyro (RLG), 29, 32, 149
rocket, 264
rotation sensitivity, 162
rovers, 34

S

Sagnac distributed sensor, 28–29
Sagnac interferometer, 47, 218
Sagnac secure fiber optic
 communication, 29, 273
Sagnac strain sensor, 27
Sagnac–Laue effect, 2
Sagnac’s experiment, 2
sawtooth, 31
scale factor, 6, 31, 99, 149
self-heterodyne method, 161
shock and vibration sensitivity, 49
Shupe constant, 175
Shupe effect, 11, 115, 152, 172, 218
Shupe error, 119
Shupe sensitivity, 115
sinusoidal phase modulation, 164
spacecraft, 29
spatial resolution, 118
special theory of relativity, 2
stabilization and orientation, 61

static parameters, 220
strain attenuation, 117
strain distribution, 117
super-luminescent diode
(SLD), 14
super-luminescent diode source
(SLED), 224
superfluorescent fiber source
(SFS), 149
symmetric coil, 120
symmetrical winding, 115

T

temperature sensitivity, 49
thermal drift, 177
thermal strain, 117
ThinFiber, 39

total internal reflection (TIR), 15
transient parameters, 220

U

unpolarized emission, 9
US Air Force (USAF), 267

V

Verdet constant, 176

W

white noise, 168
winding defects, 219
winding, 116

Y

Y-junction, 154
