About the Author

Claes-Göran Granqvist is professor of experimental physics at the Department of Physics, Chalmers University of Technology and University of Gothenburg, Sweden, where he teaches courses on thin film technology and directs research programs in materials for energy efficiency and solar energy utilization, among others. Professor Granqvist's interest in energy materials dates back to the "oil crisis" of the mid-1970s, when he recognized the important research opportunities related to materials for energy efficiency. He also works with research teams in developing countries on alternative energy technologies and is a consultant to numerous companies.

Professor Granqvist has about 240 scientific publications and several patents. In 1989 he received the Arnberg Prize from the Royal Swedish Academy of Sciences.
