SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

MIPPR 2023: Automatic Target Recognition and Navigation, edited by Jianguo Liu, Zhong Chen, Changxin Gao, Yang Xiao, Sheng Zhong, Hanyu Hong, Xiaofeng Yue, Proc. of SPIE Vol. 13085, 1308501 · © 2024 SPIE · 0277-786X · doi: 10.1117/12.3029662

Proc. of SPIE Vol. 13085 1308501-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:
Author(s), "Title of Paper," in *MIPPR 2023: Automatic Target Recognition and Navigation*, edited by Jianguo Liu, Zhong Chen, Changxin Gao, Yang Xiao, Sheng Zhong, Hanyu Hong, Xiaofeng Yue, Proc. of SPIE 13085, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

(China)

Introduction

Welcome to SPIE 12th International Symposium on Multispectral Image Processing and Pattern Recognition (MIPPR) in the city of Wuhan, China, 10-12 November 2023.

SPIE MIPPR is a flagship biennial symposium of SPIE. The symposium of 2023 took place after four years due to the Covid-19 pandemic for several years. The 11th symposium took place in November 2019. The symposium focuses mainly on the latest research in multispectral image processing and pattern recognition. The symposium has a broad charter. Multi-spectral is interpreted not just as multiple-wavelength in a narrow sense but also as multi-sensor, multi-modal, and multimedia. It covers many disciplines such as sensing, image processing, computer vision, and pattern recognition and involves the development of efficient processing algorithms and their optimization and implementation. The wide range of applications considered in this symposium include automatic target recognition, autonomous navigation, medical image processing, remote sensing, geographic information systems, and many others.

The symposium provides a forum for scientists, professors, engineers, and graduate students from universities, industries, and government laboratories to meet and exchange ideas and discuss theories, techniques, algorithms, and applications in multispectral image processing and pattern recognition. We expect that there will be ample discussions both inside and outside the lecture halls, and this will be an exciting meeting.

In response to the Call for Papers, we received 118 submissions. Based on the reviews provided by an excellent program committee, we accepted 86 papers covering many aspects of multispectral image processing and pattern recognition. To ensure a high-quality conference, all abstracts and proceedings of SPIE papers are reviewed by the peers for technical merit and English expression. The proceedings of MIPPR 2023 Symposium consist of five volumes which will be included in the SPIE Digital Library.

- Multispectral Image Acquisition, Processing, and Analysis (SPIE Volume 13084)
- Automatic Target Recognition and Navigation (SPIE Volume 13085)
- Pattern Recognition and Computer Vision (SPIE Volume 13086)
- Parallel Processing of Images and Optimization Techniques; and Medical Imaging (SPIE Volume 13087)
- Remote Sensing Image Processing, Geographic Information Systems, and Other Applications (SPIE Volume 13088)

The realization of a conference depends upon the hard work of many dedicated people. We would like to thank all the members of the organizing committee for putting together this symposium for the benefit of all the researchers. They are responsible for making this conference a success. We hope the papers and the research results presented at this conference will inspire new research in all the areas related to multispectral image processing and pattern recognition.

Bir Bhanu
