SPIE

Volume 12191

Proceedings of SPIE 0277-786X, V. 12191

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

X-Ray, Optical, and Infrared Detectors for Astronomy X, edited by Andrew D. Holland, James Beletic
Proc. of SPIE Vol. 12191, 1219101 · © 2022 SPIE · 0277-786X · doi: 10.1117/12.2656096

Proc. of SPIE Vol. 12191 1219101-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *X-Ray, Optical, and Infrared Detectors for Astronomy X*, edited by Andrew D. Holland, James Beletic, Proc. of SPIE 12191, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

Paper Numbering: A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix *Conference Committee*

SESSION 1 INDUSTRY INTRODUCTORY PRESENTATIONS

12191 02 **Silicon sensor capabilities at Teledyne e2v for visible, NIR, UV and x-ray applications
(Invited Paper) [12191-1]**

SESSION 2 CRYOGENIC DETECTORS I

12191 05 **High-uniformity TiN/Ti/TiN multilayers for the development of Microwave Kinetic Inductance
Detectors [12191-4]**

12191 09 **Progress toward optimizing energy and arrival-time resolution with a transition-edge sensor
from simulations of x-ray photon events [12191-8]**

SESSION 3 SIMULATION RADIATION DAMAGE

12191 0B **Proton induced damage after laboratory cold irradiation in CCD47-20 CCDs for CHEOPS
[12191-10]**

12191 0C **Proton radiation damage tolerance of wide dynamic range SOI pixel detectors [12191-11]**

SESSION 4 VISIBLE SENSORS I (CMOS)

12191 0E **Characterization of low light performance of a CMOS sensor for ultraviolet astronomical
applications [12191-13]**

12191 0F **Thick silicon Hi-Rho CMOS with high red response [12191-14]**

12191 0G **High dynamic range techniques for astronomical applications of CMOS devices [12191-15]**

12191 0I **COSMOS large format 64Mpixel CMOS camera for ground-based astronomy [12191-17]**

SESSION 5 X-RAY SENSORS I

- 12191 OJ **Design, testing, and validation of a space-based improved x-ray detector onboard Sharjah-Sat-1** [12191-18]
- 12191 OL **Design and test results of scientific x-ray CMOS cameras** [12191-20]
- 12191 ON **A CMOS image sensor for soft x-ray astronomy** [12191-22]

SESSION 6 INFRARED SENSORS I

- 12191 OO **Optical characterization of a low f-number cryogenic spot scan objective for infrared detectors** [12191-23]
- 12191 OP **The SATIN infrared detector development program and the road to HELLSTAR** [12191-24]
- 12191 OQ **Flux reconstruction for the NIR camera CAGIRE at the focus of the Colibrí Telescope** [12191-25]
- 12191 OR **Infrared on-detector guide-windows in the era of extremely large telescopes** [12191-26]
- 12191 OS **Testing of the HAWAII-4RG-15 prototype detector arrays** [12191-27]

SESSION 7 PHOTON COUNTING SENSORS

- 12191 OT **Characterization of single-photon sensing and photon-number resolving CMOS image sensors** [12191-28]
- 12191 OU **Design of a Skipper CCD focal plane for the SOAR Integral Field Spectrograph** [12191-29]
- 12191 OV **Fast readout of the Skipper CCD for astronomy and quantum imaging** [12191-30]
- 12191 OW **Single electron sensitive readout (SiSeRO) x-ray detectors: technological progress and characterization** [12191-31]
- 12191 OX **UVSiPM: a light auxiliary detector to measure the night sky background seen by the ASTRI mini-array Cherenkov telescopes at the Observatorio del Teide.** [12191-32]
- 12191 OY **Development of position-sensitive photon-counting imager for Ultra-Fast Astronomy** [12191-33]
- 12191 OZ **First tests of a 1 megapixel near-infrared avalanche photodiode array for ultra-low background space astronomy** [12191-34]

SESSION 8 CRYOGENIC DETECTORS II

12191 12 **Repurposing ROACH-1 boards for prototyping of readout systems for optical-NIR MKIDs**
[12191-37]

SESSION 9 QE IMPROVEMENT AND TEST

12191 13 **2D-doped silicon detectors for UV/optical/NIR and x-ray astronomy** [12191-38]

12191 14 **A low-cost ultraviolet-to-infrared absolute quantum efficiency characterization system of detectors** [12191-39]

SESSION 10 X-RAY SENSORS II

12191 15 **The focal plane camera for the Off-plane Grating Rocket Experiment** [12191-40]

12191 16 **PixDD: a multi-pixel silicon drift detector for high-throughput spectral-timing studies** [12191-41]

12191 17 **X-ray speed reading: enabling fast, low noise readout for next-generation CCDs** [12191-42]

12191 18 **Evaluation of sensors for the detection of energy resolved very soft x-ray fluorescence**
[12191-43]

12191 19 **Performance of a kilo-pixel RNDP-DEPFET detector** [12191-44]

SESSION 11 VISIBLE SENSORS II

12191 1A **High precision ground-based CCD photometry from the Next Generation Transit Survey**
[12191-45]

12191 1B **C-Blue 3 PC: a photon counting multimegapixel visible CMOS camera** [12191-46]

12191 1D **Latest results for a fast low noise CCD readout based on pJFET** [12191-48]

SESSION 12 PERFORMANCE SIMULATIONS

12191 1E **Modeling effects of charge sharing on the response of the FOXSI sounding rockets** [12191-49]

12191 1F **Calibrating and correcting charge transfer inefficiency in CCDs using Pyxel** [12191-50]

12191 1G **Modelling charge transfer inefficiency in Gaia CCDs with in-flight and on-ground data**
[12191-51]

SESSION 13 TEST

12191 1H **ESA's science next generation detector characterisation bench** [12191-52]

12191 1I **Bad pixel recognition and dark current modelling for CMOS with machine learning algorithm**
[12191-53]

12191 1J **Predicting the performance benefit of multi-level clocking in CCDs using the active trap model**
[12191-54]

SESSION 14 UV DETECTORS

12191 1L **Evaluating detector requirements for the next UV/O/IR flagship observatory** [12191-56]

12191 1M **Euclid Near Infrared Spectro-Photometer: spatial considerations on H2RG detectors interpixel capacitance and IPC corrected conversion gain from on-ground characterization** [12191-98]

SESSION 15 INFRARED DETECTORS II

12191 1N **Asteroid and ALFA programs: to equip Europe with high performance IR detectors for space applications** [12191-201]

12191 1O **A systematic study of persistence characterization protocols on SWIR HgCdTe detectors for astronomy applications** [12191-200]

12191 1P **ARIEL early engineering model H1RG IR detector: test bench description and first characterization results** [12191-202]

SESSION 16 INFRARED DETECTORS III

12191 1Q **Improving the photometric accuracy of JWST by limiting the dynamic range of integrations**
[12191-57]

12191 1R **Sub-electron noise infrared camera development using Leonardo large format 2Kx2K SWIR LmAPD array** [12191-58]

12191 1S **Initial characterization of the ME1120 ROIC for the 512x512 pixel large SAPHIRA infrared e-APD array** [12191-60]

12191 1T **Performance of a ground and space-based MCT detector stressed at low temperature**
[12191-61]

- 12191 1U **Packaging design and test of cryogenic readout electronics for the Euclid Near Infrared Spectrophotometer** [12191-62]
- 12191 1V **Status update on the NEO surveyor detector development** [12191-63]

POSTER SESSION I

- 12191 1X **Optimal design and method of Cassegrain instrument unit for 1.2 m Sun Yat-sen University telescope** [12191-65]
- 12191 1Z **The Signal Processing ASIC for astronomical CCD controller** [12191-67]
- 12191 20 **Design of the electronic system for a mini single CCD camera based on ASIC** [12191-68]
- 12191 21 **High-speed array controller (HIAC) for multi-channel imaging detectors** [12191-69]
- 12191 24 **X-ray speed reading with the MCRC: a low noise CCD readout ASIC enabling readout speeds of 5 Mpixel/s/channel** [12191-73]
- 12191 26 **Design of a scientific CMOS camera for astronomical observation** [12191-75]

POSTER SESSION II

- 12191 2A **Testing results from pathfinder HgCdTe infrared detectors for the Near-Earth Object Surveyor mission** [12191-78]
- 12191 2C **Results of accelerometer monitor in the ground testing of Resolve x-ray microcalorimeter instrument onboard XRISM** [12191-80]
- 12191 2D **Design and manufacture of the carrier and flex cable for the Leonardo 1K** [12191-81]
- 12191 2E **Development of polarization-sensitive imaging detectors based on organic nanostructured coatings** [12191-82]
- 12191 2F **ADR control electronics for Athena-X-IFU instrument, status, and perspectives** [12191-83]
- 12191 2I **Quantix and Intrapix: test benches dedicated to quantum efficiency measurement and intra-pixel response of detectors from VIS to LWIR** [12191-87]

POSTER SESSION III

- 12191 2K **Charge transfer efficiency of CCDs with a single-polysilicon gate structure** [12191-89]

- 12191 2L **Study of radiation-induced effects on the RIGEL ASIC** [12191-91]
- 12191 2M **C-RED 2 ER: high speed extended range InGaAs cameras** [12191-92]
- 12191 2N **Readout and cooling of the WINTER InGaAs camera** [12191-93]
- 12191 2O **Development of a novel photon counting detector for UV spectrographs** [12191-94]

Conference Committee

Symposium Chairs

René Doyon, Université de Montréal (Canada)
Shouleh Nikzad, Jet Propulsion Laboratory (United States)

Symposium Co-chairs

Sarah Kendrew, European Space Agency (United States)
Satoshi Miyazaki, National Astronomical Observatory of Japan
(Japan)

Conference Chairs

Andrew D. Holland, Centre for Electronic Imaging (United Kingdom)
James Beletic, Teledyne Imaging Sensors (United States)

Conference Programme Committee

Alessandra Ciapponi, European Space Research and Technology
Centre (Netherlands)
Chiaki Crews, The Open University (United Kingdom)
Elizabeth M. George, European Southern Observatory (Germany)
Michael E. Hoenk, Jet Propulsion Laboratory (United States)
Alex Harwit, Ball Aerospace (United States)
Douglas Jordan, E2V Scientific Instruments Ltd. (United States)
Ralf Kohley, European Space Astronomy Centre (Spain)
Gregory Mosby Jr., NASA Goddard Space Flight Center
(United States)
Brian Shortt, European Space Research and Technology Centre
(Netherlands)
Roger M. Smith, California Institute of Technology (United States)
Takeshi Go Tsuru, Kyoto University (Japan)
